

clearTrack 2.0
by Luminous Software Solutions Inc.

Distributed exclusively by

clearTrack 2.0 is a regulatory management tool designed to assist oil and gas companies record, track and manage its fuel usage, greenhouse gas and fugitive emissions within their operations. **clearTrack 2.0** is designed to meet ERCB Measurement Directives (D60 & D76) as well as WCI reporting requirements for GHG emission reporting

Features & Benefits

- **Fugitive Emission Management**
 - Tracking inspections of facilities / sites
 - Track unrepaired and repaired leaks
 - Perform decision tree analysis on repair costs as required by the ERCB
 - Track fugitive emission trends with regards to equipment and/or facility types and/or by operating district
 - User-selectable report features that are exportable to excel (xls) or acrobat (pdf) files
 - Generate ERCB-approved reports for government audits of inspections and leaks identified
- **Enhanced Production Audit Program (EPAP)**
 - Equipment Inventory of equipment that uses fuel for production accounting purposes
 - Common equipment types pre-populated in master tables
 - Detailed breakout by fuel type used (natural gas metered/unmetered, propane, etc.)
 - Detailed breakout by fuel consumption (flared, vented or combusted)
 - Updated monthly by field staff (approximately 15-30 minutes/month for a 50 wellsite run)
 - Reports that are user-friendly for production accountants to transfer into PA reporting software
- **Greenhouse Gas Reporting**
 - Takes the fuel/flare/vent data and converts it to greenhouse gas (GHG) data for government or corporate reporting requirements
 - Calculations are in adherence to the Western Climate Initiative (WCI) which is fast becoming the standard for North America
 - User-defined reports allow for a variety of report types.
 - Data exportable to excel (xls) for further data manipulation / reporting
- **Security**
 - Multiple levels of access are built into the system to ensure data integrity.
 - Security levels are assigned and managed by the company's system administrator.
- **Program Management**
 - System allows for email reminders of when repairs are due.
 - Multiple user access can allow field personnel to close tags once the repairs are completed.
